                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov, or see http://genome.wustl.edu
University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA On May 5, 1999 this sequence version replaced gi:4139346.
                                                                                                                                                                                                                                                                                              NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J. J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from and coworkers at http://www.resgen.com) or Pieter de Jong VECTOR: pBACCe3.6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The clone sequenced to the right is RP4-703PB. Actual start of this clone is at base position 1 of RP11-331D5 actual end is at
                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence was finished as follows unless otherwise noted:

Submitted (20-00V-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 20, 2002 this sequence version replaced gi:23811557.

The sequence in this assembly is a combination of BAC based reads and whole genome shocton sequencing reads assembled using Arlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Arlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shocton sequence reads. Both end sequences and whole genome shocton sequence reads. Both end sequences and whole genome table. Worley, K.C.

                                                                                                                                                                     arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rattus.

ON NOV 19, 2002 this sequence version replaced gi:23270153.
The sequence in this assembly is a combination of BAC based reads and whole genome shocgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (17-FEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

                            individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft" sequence. It currently
consists of 4 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         68
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Center Clohe name: CH230-188N19

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 16.9%; Score 76.8; DB 2; Length 222251; Best Local Similarity 80.6%; Pred. The sequence is that of a cDNA sequence 20sa7 which was isolated from the 20q13 amplicon. It is a homologue of the rat gene BEM-1 and can be used as a probe for the detection of chromosomal abnormalities at 20q13. It and other sequences isolated from the 20q13 amplicon are consistently

New sequences from the 20q13 amplicon – used for detecting chromosomal abnormalities, particularly tumours, and for developing products for treating diseases.

```
amplified in primary tumours. These sequences are useful as probes or as probe targets for monitoring the relative copy number of corresponding sequences from a biological sample such as tumour cells. The sequences can also be used in therapeutic applications for modulating the expression of the endogenous gene or the activity of the gene product. Examples of therapeutic approaches include antisense inhibition of gene expression, gene therapy, and monolonal antibodies that specifically bind the gene products. The products can also be used in the treatment of other diseases, e.g. age-related macular degeneration, Leber's congenital amaurosis and retinitis pigmentation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis of cancer the categories of dispression by rectifying mutations or deletions in a patient's genome example. N and P may be used to treat disporters associated with decreased complement the patients own production of P. Additionally. N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37789 represent

Sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1094

                                                                                                                                                                                                                                                                                                                                                                                                     This cDNA sequence comprises clone WK121315 a partial cDNA clone of novel human islet cell antigen 1851. It was isolated from human insulinoma cDNA by PCR amplification (see AAF9524-25). Other partial clones (see AAF95226 and AAF95228) were similarly obtained. Subsequent 5' RACE yielded a claimed sequence (see AAF95221) for islet cell antigen 1851 (see AAM95297). This antigen forms an immun complex with an altocantibody found in patients at risk of corporations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       119

The present invention describes a predictor set comprising a plurality of polynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase activity or members of the protein tyrosine kinase contains the activity of cells, comprising obtaining a sample of cells, correlating the expression of the markers a plurality of markers, and correlating the expression of the markers a plurality of markers, and correlate the activity of the cells; (2) a plurality of cells lines for identifying polynucleotides and polypeptides whose expression levels correlate with compound sensitivity or resistance of cells associated with a disease state; and (3) identifying polynucleotides and cells associated with a disease state, comprising subjecting the plurality of cell lines to one or more compounds, analysing the expression pattern of a microarray of polynucleotides or polypeptides, and selecting coll lines to one or more compounds, analysing the expression pattern of cells associated with a disease state by using the expression pattern of the microarray. The polynucleotides and polypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of the microarray. The polynucleotides and polypeptides are useful in predicting the coll public protein tyrosine kinases and/or activity of compounds that interact with protein tyrosine kinases and/or activity of compounds that interact with protein tyrosine kinases and/or activity of compounds that interact with protein tyrosine kinases and/or activity of compounds that interact with protein tyrosine kinases and/or activity of compounds that interact with protein expression pattern of the microarray of activities and polypeptides are useful in predicting the content of the microarray of the protein kinases and polypeptides and polypeptides are useful in predicting the content of th

This invention relates to a method of differentially modulating the growth or differentiation of blood endothelial cells (BEC) or lymphatic endothelial cells (LEC) comprises contacting endothelial cells with a composition comprising an agent that differentially modulates blood or lymphatic endothelial cells. Treating hereditary lymphoedema comprises contaction and with a mutation in at least one allele of a gene encoding a LEC protein, where the mutation in at least one allele of a gene encoding a LEC protein, where the mutation in at composition comprising a lymphatic growth agent selected from VEGF-C or VEGF-D polypeptides and polymucleotides. The invention may be useful for the becompounds with an antiangiogenic, cytostatic, composition comprising a lymphatic growth agent selected from VEGF-C or VEGF-D polypeptides and polymucleotides. The invention may be useful for the development of compounds with an antiangiogenic, cytostatic, cytostatic, vasotropic or antiinflammatory activity or for gene therapy. The method is useful in modulating the growth or differentiation of blood endothelial cells or lymphatic endothelial cells, in treating hereditary lymphocdema, in screening for an endothelial cells, in treating hereditary cycle advisement for the discorder or in monitoring the efficacy or toxicity of a drug on endothelial cells. The agent is useful in manufacturing a medicament for the treatment of the discorder or in monitoring the efficacy or toxicity of a drug on endothelial cells. The agent is useful in manufacturing a cell or lymphatic growth agent may also be used in manufacturing a medicament for the treatment of hereditary lymphoedema resulting the supparation. The lymphatic growth agent may also be used in manufacturing a wedicament for the treatment of hereditary lymphoedema resulting the lymphatic system or of other diseases and cancer metastasis via the lymphatic constructions inflammatory diseases and cancer metastasis via the lymphatic system. The presents sequence is that of a human LEC and the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibody that binds to tumor-associated antigenic target polypeptide (TAT), useful in preparing a composition for diagnosing or treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to novel isolated antibodies that are useful for the diagnosis and treatment of a tumour. Specifically, it refers to DNA that is detectably labelled and conjugated to a growth inhibitory or cytotoxic agent and comprises toxins, antibiotics, radioactive isotopes or nucleolytic enzymes. The present invention refers to the toxin maytansinoid or callcheamicin, where the host cell is one of chinese hamster overy (CHO), yeast or Escherichia coli cell is one of chinese pharmaceutical compositions are cytostatic and can be used for gene therapy purposes to treat various cancers. The invention relates to an isolated polynuclectide (I) comprising: (a) any of a group of over 4000 nuclectide sequences (ABV94628-ABV99145); (b) complements of (a); (c) sequences consisting of a Least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pencreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and pancreatic tumor polypeptides, useful f
diagnosing, preventing and/or treating cancer, particularly pancreatic
cancer.

and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to tract disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to a ssesse biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 44

                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                        The invention relates to a novel polynucleotide isolated and purified from a human gene having any one of 915 fully defined sequences as given in specification, or a sequence having a base substitution. The invention further relates to: an oligomorbidic containing single nucleotide polymorphisms; a PCR primer set chosen from the combination of two DNA fragments from any one of 1220 fully defined sequences as given in specification; a labelling probe containing the SNP containing oligo; and a microarray equipped with the SNP containing oligo. The isolated human gene of the invention is useful for detecting the single nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                              351

                                                                                                                                                                                                                                                                                                 polymorphisms in human gene. The isolated human gene is also useful for diagnosis of disease and determination of side effect to a medical agent. The isolated human gene is also effective in detecting single nucleotide polymorphisms in a human gene. This polymucleotide sequence represents one of the 935 isolated polymucleotides from a human gene of the

                                                                                                                                                                                                                                 The invention relates to a novel polynucleotide isolated and purified from a human gene having any one of 935 fully defined sequences as given in specification, or a sequence having a base substitution. The invention further relates to: an oligonucleotide containing single nucleotide polymorphisms; a PCR primer set chosen from the combination of two DNA fragments from any one of 1220 fully defined sequences as given in specification; a labelling probe containing the SNP containing oligo; and a microarray equipped with the SNP containing oligo. The isolated human gene of the invention is useful for detecting the single nucleotide polymorphisms in human gene. The isolated human gene is also useful for diagnosis of disease and determination of side effect to a medical agent. The isolated human gene is also effective in detecting single nucleotide polymorphisms in a human gene. This polymorphisms in a human gene. This polymorphisms in a human gene rhis polymorphisms on a human gene of the human gene of the

in specification, or a sequence having a base substitution. The invention further relates to: an oligomucleotide containing single nucleotide polymorphisms; a PCR primer set chosen from the combination of two DNA fragments from any one of 1220 fully defined sequences as given in specification; a labelling probe containing the SNP containing oligo; and a microarray equipped with the SNP containing oligo; proportion is useful for detecting the single nucleotide polymorphisms in human gene. The isolated human gene is also useful for diagnosis of disease and determination of side effect to a medical agent. The isolated human gene is also useful for the isolated human gene. This polymorphisms in a human gene. This polymorleotide sequence represents one of the 935 isolated polymucleotides from a human gene of the

polynucleotide useful for detecting single nucleotide polymorphisms

The invention relates to a novel polynucleotide isolated and purified from a human gene having any one of 935 fully defined sequences as given in specification, or a sequence having a base substitution. The invention further relates to: an oligonocleotide containing single nucleotide polymorphisms; a PCR primer set chosen from the combination of two DNA fragments from any one of 1220 fully defined sequences as given in specification; a labelling probe containing the SNP containing oligo, and a microarray equipped with the SNP containing oligo. The isolated human gene of the invention is useful for detecting the single nucleotide

polynucleotide useful for detecting single nucleotide polymorphisms human gene Novel Ξ

Claim 1; SEQ ID NO 319; 704pp; Japanese

The invention relates to a novel polynucleotide isolated and purified from a human gene having any one of 935 fully defined sequences as given further relates to: an oligonucleotide containing single nucleotide polymorphisms; a PCR primer set chosen from the combination of two DNA fragments from any one of 1220 fully defined sequences as given in specification; a labelling probe containing the SNP containing oligo; and a microarray equipped with the SNP containing the SNP containing oligo; and gene of the invention is useful for detecting the single nucleotide polymorphisms in human gene. The isolated human gene is also useful for diagnosis of disease and determination of side effect to a medical agent. The isolated human gene is also effective in detecting single nucleotide polymorphisms in a human gene. This polymorphisms sin a human gene. This polymorphisms of the 935 isolated polymucleotides from a human gene of the invention 90.5%;

cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy cand vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased cypression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent C Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922
                                                                          ö

in the interior of the construction of canine microarrays containing a sequences and the construction of canine microarrays containing a significant portion of the canine genome. The isolated canine nucleic caid sequences of the invention may be useful for assessing the impact, including toxicity, of a compound, pharmaceutical agent or environmental pollutant on a cell or living organism. The methods are useful for detecting genes that are up- or down-regulated in canines in disease state. The sequences are useful as diagnostic agents or markers to detect a cellular response in a sample individually or as part of a gene expression profile. It is also useful as a target for agents that condulate gene expression or activity. The database is useful for producing electronic Northernus that allow the user to determine the cell type or tissue in which a given gene is expressed and to allow determination of the abundance or expression level of a given gene in a samilarity of a toxic response to one or more individual compounds. The methods are useful for predicting at least one toxic response or the similarity of a toxic response to one or more individual compounds. The methods are useful for predicting at least one toxic response or the liver liver necrosis, fatty liver cannot brain or testes, or other pathologies associated with at least one

of the toxins. The methods are also useful for predicting or elucidating the potential cellular pathways influenced, induced or modulated by the compound or test agent due to the similarity of the expression profile compared to the profile induced by a known toxin. The present sequence is that of a canine DNA sequence which was claimed for use during the production of a canine microarray of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      535 ATGNNNNNATACTCAGATAAATTAGTTTCTATTCATTATTTAGATTCCAGATAGGGAGA 476

Sequence 5619, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILLE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: 00/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: PEASESQ for Windows Version 4.0

LENGTH: 4541

/clone libe made libe modified polylinker; Site l: Not I;
Site 2: Eco R1; Equal amounts of plasmid DNA_from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHHPU, and fetal heart NbHHPM) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223,

with a modified polylinker; 1st strand cDNA was prepared
from normal prostate bulk tissue, and was then primed with
a Not I - oligo(dT) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI sites of the
modified pT7T3 vector. Library is normalized, and was

                 with Not I, and cloned directionally into pT713-Pac vector. The oligonucleotide used to prime the synthesis of lists-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CCGCC. This library was created for the program, Gene Discovery in the Visual System, supported by National Bye Institute (NEI).

TAG_LIB=UI.E-CCGCC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an olign-dT primer containing a Not I site. Double stranded cDNA was ligated to an Ecos I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Email: cgapbs-remail.nih.gov

/ul-CF-EC1 is a normalized cDNA library containing the following tissue(s): Normal lung from adult and from fetal day 64, day 87, week 19 and week 42. The library was constructed according to Bonaldo, Jennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr prime containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the Name of the synthesis and the synthesis was prime the synthesis to first-strand cDNA contains a library tag sequence that is located between the Not I site and the synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TISSUE=Normal Lung Epithelial Cells Tissue nos 369-371

/note="Organ: Kidney; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site 1: Not 1; Site 2: Eco RI; Plasmid DNA from the normalized library NCI CGAP Kid3 was prepared, and se circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1322376-1323911, 1456007-1456775, and Fatima Bonaldo. "Batima Bonaldo."
